Company Presentation

# Who are we?

## it's all about collaboration

Our journey, which began in 1982 at a carpentry workshop in Nizip, Gaziantep, has today transformed into a vision that shapes the post-pandemic office culture; operating from 32,000 m<sup>2</sup> of indoor and 60,000 m<sup>2</sup> of outdoor production facilities.

With our team of 400, 25% of whom are women, we produce not just furniture, but modular, smart, and interconnected solutions built on the principles of sustainability.

We combine our 40 years of experience, evolving from a traditional carpentry workshop to the region's largest manufacturer, with designs that are flexible, enjoyable, and centered on collaboration; and through our solution network across 70 locations, we carry this experience to the world.

At Marwood's sustainability-focused production facilities, we bring project orders to life rapidly through ethical and transparent process management.

## discover a place you'll love to work

**Our Vision;** We envision a world where every workspace is a source of creativity, collaboration, and vitality. We strive to pioneer the movement towards sustainable and innovative workspaces that support this dynamic and vibrant culture.

**Our Mission;** To create sustainable, aesthetic, and functional furniture to foster work and social environments.

## co-cultural with marwood

The great construction process that the people of Göbeklitepe achieved together centuries ago stands as history's greatest collaboration manifesto for us. This culture of collective creation, embedded in our company's DNA, is the origin of our motto: **it's all about collaboration**. We blend that unifying power of the past with today's modern production vision.

Our commitment to this land is reflected not only in our philosophy but in every detail of our products. The 13 metal colors that bring our designs to life were inspired by the distinctive textures and tones of Mesopotamia. On this path we have taken, based on harmony with nature and people, we preserve our local heritage and fulfill our responsibility by creating social benefit.

We transformed the unique mosaic patterns inspired by our culture into a special carpet design. We showcased this cultural texture as the complementary and signature piece of our stand at Orgatec 2022 and IFF 2023 fairs.

# Why Marwood ?

At Marwood, we see ourselves not just as a furniture manufacturer, but as a reliable project partner. With design-focused communication, value engineering, sustainable production, and our global vision, we aim to provide the most accurate, high-quality, and cost-effective contribution to your projects.

### **Wide Product Range & Flexibility**

Our standard collection offers a wide typology and size variety. We provide flexibility in size, aesthetic, and ergonomic adaptations suitable for your project's concept.

### **Optimized 3D Library & AutoCAD Blocks**

We simplify the work of designers by offering 3D archives and AutoCAD drawing support for all standard products.

### **Sustainability**

We operate entirely on solar energy, use recycled raw materials, and minimize our environmental footprint with our EcoHue zero-waste powder coating technique and recyclable packaging.

### **Project Collaboration & Custom Design**

With the support of our R&D team, we bring your custom product requests to life. As seen in our collaborations with DenizBank, Ziraat Bankası, and Linktera, we offer solutions that reflect the designer's language and support the space's usage scenarios and design identity.

### **Fast & Reliable Delivery**

We provide delivery suitable for your project's schedule with road and sea transportation alternatives. We maintain quality control by conducting all production under one roof at our integrated facilities.

We do not only produce furniture; we contribute our production power to artistic visions that shape the design world. At the IABA 2025 Antalya Architecture Biennial, we realized the 'Sıkışık' installation together with Tamirci Architects.

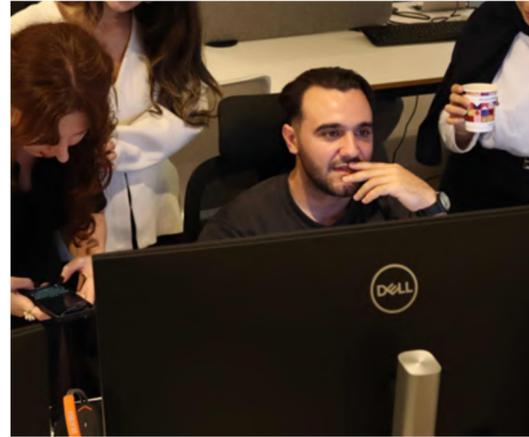

## Discovery

We analyze your project needs and the spirit of the space to determine our roadmap together.

## 3D Design and Approval

We present the space you envision with the most realistic 3D visuals and receive final approval through mutual exchange of ideas on the design.

## Production

We bring our products to life in our advanced technology production facility with expert craftsmanship.

## Delivery and Installation

We deliver our furniture ready for use by completing the logistics process with fast and seamless installation by our expert assembly teams.

## Project Process

We lay a flawless project foundation by clarifying your expectations, material selections, budget planning, and process details.

## Prototyping

We prepare samples of products and details before production; we submit quality, aesthetic, and ergonomic tests for your approval.

## Quality Control

We examine every produced piece down to the finest detail and conduct technical and visual inspections with a zero-defect principle before shipment.

## After-Sales Support

We stand by you even after project delivery. We continue our business partnership with confidence for many years.

We do not only do mass production; we also develop space-specific solutions such as these custom planters in the Intertech Project. We turn the custom productions your projects require into reality with our strong industrial infrastructure.

# Culture & Values

## “From Nature to Nature”

We make environmentally friendly choices when making our corporate decisions

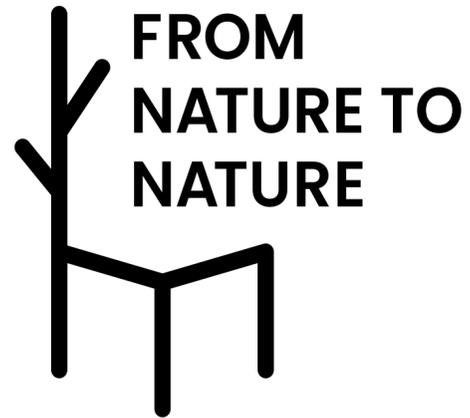

## “Smart Design”

All our products are designed to be easily integrated with each other, with the ability to add extensions and mobile structures.

## “Collaboration”

We work hand in hand with architects, designers, and clients, creating shared value through partnership at every stage from concept to completion.

By embracing the **From Nature to Nature** concept, we are committed to resources being taken from nature and used in a circular manner, and to waste being disposed of without harming nature.

We approach sustainability with a comprehensive sense of responsibility; we progress with sensitive and benefit-oriented principles in every area, from human resources to production, from social development to environmental impact.

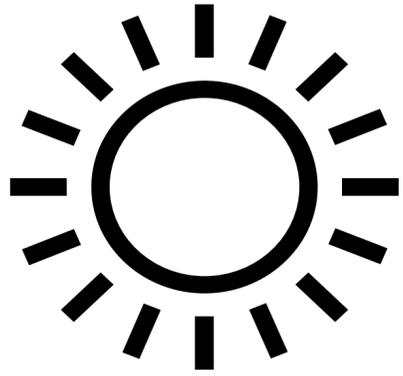

We target universal standards in our sustainability policies; as a furniture manufacturing company with SEDEX audit and certification since 2023, we maintain our commitment to ethical and responsible business practices. In our business processes, we place social responsibility-focused, socially and ethically risk-conscious, transparent, and sustainable values at our core.

# Marwood **ecohue** waste paint reclamation

Marwood strives to create a circular economy model in paint usage by acting on the principle of sustainability. EcoHue collects waste powder paints accumulated during production and recycles 4 tons of waste powder paint 100% each year, bringing them back into use. We use the gray-toned paint obtained by mixing waste paints of different colors and tones on the hidden surfaces and components of our Marwood designs. With EcoHue, we color 26,800 m<sup>2</sup> of material each year with EcoHue gray paint obtained through recycling.

We have been using solar energy systems at our production facilities in Nizip district of Gaziantep since 2021. The 1.1 MW capacity system, commissioned in 2021, has generated 5.01 GWh of energy and prevented 3,246,309 kg of carbon emissions. The second system, commissioned in 2023, has produced 1.2 GWh of energy and prevented 1,048,416 kg of carbon emissions. Thanks to our solar energy systems with a total capacity of 2.2 MW, 130% of our production facilities' energy consumption is covered, and our carbon footprint is significantly reduced.

We target universal standards in our sustainability policies and as a furniture manufacturing company with SEDEX Audit and Certification since 2023, we maintain our commitment to ethical and responsible business practices.

FSC® C114358 certified.

Marwood produces smart furniture solutions for the changing needs of dynamic workspaces and social areas; developing modular, mobile, and adjustable designs within the framework of the Flexo principle. Thanks to these criteria that Marwood places at the center of its product design, product groups capable of meeting needs in different types of spaces and suitable for creating multiple configurations are being developed.

This approach, which enables the most efficient furniture layout in spaces for interior architects and planners, also offers a smart, efficient, and comfortable experience for end users. Through the integrable, expandable, and mobile structures of main product groups such as seating units, workstations, and storage systems, an experience harmonious with the user and space is provided.

Height-adjustable desks within Marwood's product range of smart designs offer flexible and ergonomic solutions for changing work environments. These systems, which allow the option of working while seated or standing, create dynamic work environments by prioritizing user health and work efficiency.

# Marwood **Flexo** flexible working structures

**Flexo** allows us to produce furniture that adapts to the dynamic and changing needs of workspaces. Our products feature modular design, mobility, adjustability, and multifunctionality, enabling employees to work more efficiently and comfortably.

Through Marwood Flexo, we engineered and introduced new and unique connection details that bring innovation to the industry.

The FLEXO principle forms the essence of our design philosophy. Through this approach, we design furniture that carries long-term functionality and value in an aesthetic balance beyond trends.

# Marwood Nexora young collective

**Nexora** brings together young talents from different design disciplines with Marwood's deep-rooted experience on a shared production ground, free from hierarchy.

While Marwood shares its experience, our young colleagues shape the process with their talents and vision. Thanks to this culture of mutual nourishment where everyone learns from each other, we place employee happiness at the center of innovation and design the projects of the future side by side.

In an environment where male-dominated workforce prevails in the furniture manufacturing industry, we do not apply gender-based limitations to the roles and positions of our female colleagues. Through vocational training programs we conduct in partnership with İş-Kur, we increase female employment in every area, from administrative offices to production lines.

Marwood

The collaboration between Marwood’s approach to supporting young designers and Sosyaliz makes visible the ground where design intersects with production, education, and social experience. Zehra Cemre Koç’s project offers a powerful example of design’s potential to “leave a mark” on both individual and collective levels, illuminating a path forward for spaces built on connection and co-creation.

Medy adapts to your spaces with its flexible design and organic forms, bringing together comfort and functionality. Its modular structure, which shapes according to your needs, offers tailored solutions for every project.

# Materials

*\*\*Click to View Our Materials.*

Marwood's material selection was designed to achieve flawless harmony between wood tones, 13 metal colors, and the existing fabric palette.

Marwood gives designers the freedom to create a wide variety of texture and color combinations in different concepts.

We offer a wide variety of colors and textures that can adapt to different space identities while maintaining aesthetic integrity for every project. Our material wheel, which gives designers the opportunity to create free combinations, enables you to produce solutions suitable for the architectural language and concept.
